PERSONAL PORTFOLIO WEBSITE
MINI PROJECT REPORT

Name: Vivedha K

Degree: B.E Computer Science and Engineering

Institution: St. Joseph’s College of Engineering, Chennai

ABSTRACT

This project focuses on the design and development of a personal portfolio website to showcase academic background, technical skills, certifications, projects, and contact information. The website is developed using HTML and CSS to ensure a responsive, structured, and user-friendly interface. It provides a centralized platform for presenting professional achievements and project work in an organized manner. The portfolio highlights hands-on experience in full stack development and modern web technologies. This project serves as both an academic submission and a professional digital profile for career opportunities.

INTRODUCTION

A personal portfolio website is an essential tool for showcasing an individual's academic achievements, technical skills, and project experience. This project involves the development of a responsive portfolio website using HTML and CSS. The website presents information such as education, internships, certifications, skills, and projects in a structured format. It helps in creating a professional online presence for students and aspiring developers. The portfolio also serves as a platform for recruiters and peers to easily access personal and technical details.

OBJECTIVES

- To design and develop a responsive personal portfolio website using HTML and CSS.
- To present academic details, technical skills, certifications, and project information in a structured manner.
- To create a user-friendly interface with smooth navigation through different sections.
- To showcase internship experience and technical expertise for career and placement opportunities.
- To build a professional online presence that can be easily shared with recruiters and institutions

SYSTEM REQUIREMENTS

Hardware Requirements:

• Computer/Laptop
• Internet Connection

Software Requirements:

• HTML5
• CSS3
• Web Browser

TECHNOLOGIES USED

- HTML5 and CSS3 were used to design and style the structure of the portfolio website.
- Visual Studio Code (VS Code) was used as the primary code editor for writing and managing the source code.
- Google Chrome browser was used for testing, debugging, and previewing the website output.
- Responsive design techniques were applied to ensure compatibility across different screen sizes.
- Basic web development tools and browser developer tools were used to improve layout and performance.

SYSTEM ARCHITECTURE

The system architecture of the personal portfolio website is based on a simple and efficient client-side design. The user accesses the website through a web browser such as Google Chrome, which renders the content. HTML is used to structure the web pages and organize the information, while CSS is applied to style the layout and ensure responsiveness across devices. The entire application runs on the client side without the involvement of a backend server or database. This architecture makes the system lightweight, easy to maintain, and fast to load.

MODULE DESCRIPTION

Home Module:

The Home module serves as the landing page of the portfolio website and provides a brief introduction about the user. It highlights the user's name, role, and a short professional summary, creating a positive first impression. This module also includes quick navigation links to other sections of the website.

Education Module:

The Education module displays the academic background of the user in a structured format. It includes details such as degree, institution name, and duration of study. This module helps viewers understand the educational qualifications and academic journey of the user.

Experience Module:

The Experience module presents the internship and professional training details of the user. It describes the organization name, role, duration, and a brief summary of the responsibilities and learning outcomes. This module showcases practical exposure and industry-relevant experience.

Skills Module:

The Skills module highlights the technical competencies of the user, including programming languages, frameworks, and tools. Skills are displayed in a clear and visually organized manner for easy understanding. This module reflects the user's technical strengths and areas of expertise.

Projects Module:

The Projects module provides detailed information about the projects completed by the user. It includes the project title, description, and key functionalities.

Certifications Module:
The Certifications module lists the professional and technical certifications achieved by the user. It helps validate the user's skills and learning efforts through recognized platforms and institutions. This module adds credibility to the portfolio.

Contact Module:
The Contact module allows visitors to get in touch with the user easily. It includes input fields for name, email, and message, enabling communication. This module ensures accessibility and interaction between the user and visitors.

CONCLUSION

The personal portfolio website was successfully designed and developed using HTML and CSS to showcase academic details, technical skills, certifications, projects, and internship experience. The website provides a clean, user-friendly, and responsive interface that effectively represents the professional profile of the user. This project helped in understanding the fundamentals of web development, including page structuring, styling, and navigation. It also demonstrates the practical application of front-end technologies in creating real-world web solutions. Overall, the portfolio serves as both an academic submission and a professional digital identity.

FUTURE ENHANCEMENTS

In the future, the portfolio website can be enhanced by integrating JavaScript to add dynamic and interactive features. A backend system can be implemented to handle form submissions and store contact details securely. Additional features such as a downloadable resume, dark mode, and animations can improve user experience. The website can also be deployed online using cloud platforms for wider accessibility. Further improvements may include adding more projects, achievements, and real-time updates to keep the portfolio up to date.
